

A scatter plot showing the distribution of baserunners across eight categories: 000, 001, 010, 011, 100, 101, 110, and 111. The y-axis represents the count of baserunners, ranging from 0 to 10. A horizontal blue line is drawn at y=5. The data points are represented by black dots. The distribution is roughly symmetric around the center categories (010, 100, 110), with the highest counts (up to 10) occurring in the 111 category.
